INVENERGY SPINDEL HILL

McGee Company supplied two QGV-75's to Spindel Hill Energy, which is a division of Invenergy Spindel Hill and their 2nd longest operation power generation plant in Colorado dating from 2007.

Obstacles Overcome

Invenergy was operating with aging, unreliable equipment at a critical power generation facility, creating significant operational risk. The project also required strict adherence to the oil industry's rigorous safety standards, along with tight timelines that allowed no downtime during implementation. McGee Company provided expert equipment selection and engineering support to address these challenges. By carefully planning and executing the project, we ensured compliance with all safety requirements while maintaining continuous plant operations. McGee Company delivered reliable, high-performance equipment backed by dependable service and professional installation—all at a competitive price—helping Invenergy improve system reliability without disrupting operations.

CITY OF AURORA

City of Aurora WWTP had McGee Company replace their existing compressors with 2 state of the art Quincy QGS-30's and a refrigerated air dryer at one of Aurora's water reclamation plants.

Obstacles Overcome

The City of Aurora faced aging equipment at a critical wastewater treatment plant in Aurora, Colorado. McGee Company successfully installed replacement equipment on a tight schedule, ensuring uninterrupted plant operations by providing an electric rental compressor and executing a fast, professional installation.

KROGER CUSTOMER FULFILLMENT CENTER

McGee Company installed two QSI-125 compressors and two each -40deg 530CFM desiccant dryers to Kroger's new customer fulfillment center (CFC).

Obstacles Overcome

To enhance delivery speed and operational efficiency, Kroger set out to build a next-generation distribution center in Denver. McGee Company partnered closely from concept through completion, delivering a cutting-edge compressed air system to support the facility's advanced robotics and AI-driven operations. The project required designing a system capable of performing reliably in Colorado's demanding climate and high-altitude conditions, while also collaborating closely with the general contractor to meet aggressive construction timelines. McGee Company played a critical role in successfully bringing this innovative facility online.

NOVO NORDISK

Novo Nordisk, a major Pharmaceutical and the makers of Ozempic, worked with McGee Company to design and install their new Facility in Boulder, CO with two QOFT-75 oil free compressors, two -100deg Desiccant dryers at the pilot plant as well as two QOF-150 Compressors and two -100Deg Desiccant dryers at their main plant.

Obstacles Overcome

Norvo Nordisk has selected McGee Company as its compressed air partner, not only to supply equipment but also to provide long-term service support for these critical systems. This partnership includes ongoing service contracts to maintain compressors in both the new pilot plant and the main production facility in Boulder, Colorado. McGee Company also played a key role in the design and engineering of the compressed air system for the main production plant and successfully integrated the equipment into the facility's building management systems.
